## **Develop The Web Application Using Node-RED**

1. To Develop the web application using Node-RED

## Steps:

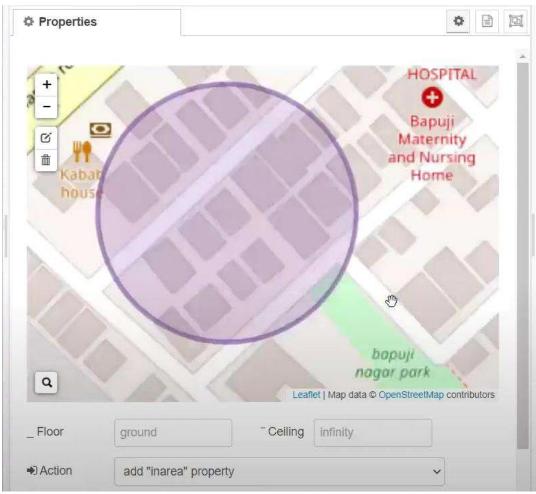

Open a Node-RED project

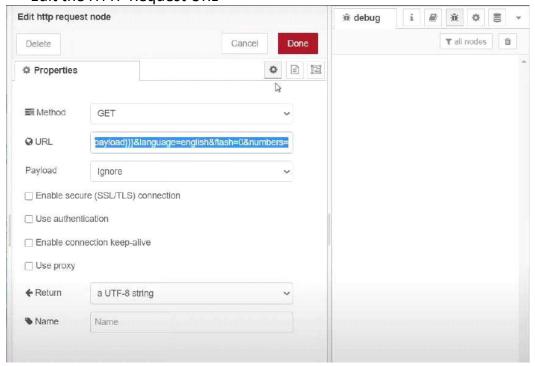

Add code to get child location in python

```
import json
import wiotp.sdk.device
import time
myConfig = [
     "identity": {
         "orgId": "hj5fmy",
"typeId": "NodeMCU",
"deviceId": "12345"
          "token": "12345678"
client = wiotp.sdk.device.DeviceClient(config=myConfig, logHandlers=None)
client.connect()
Thile True:
          name= "Smartbridge"
          #in area location
          latitude= 17.4225176
          longitude= 78.5458842
          #out area location
          #latitude= 17.4219272
          #longitude= 78.5488783
myData={'name: name, 'lat':latitude, 'lon':longitude}
client.publishEvent(eventId="status", msgFormat="json", data=myData, qos=0, onPublish=None)
          print("Data published to IBM IoT platfrom: ", myData)
          time.sleep(5)
client.disconnect()
```

Create the GeoFence

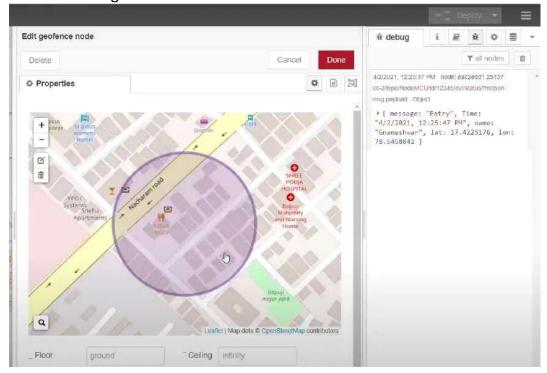

• Edit the HTTP Request URL

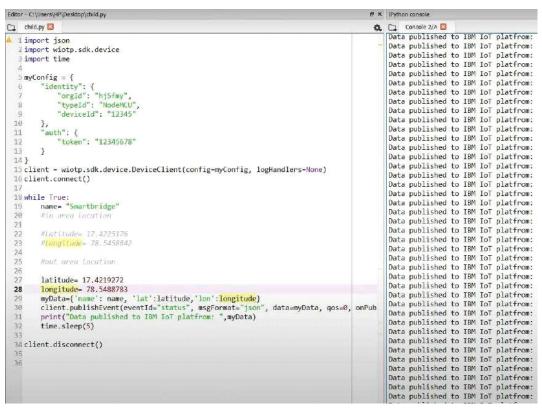

## Locate the child

Create the geofence node

Python script send requests to IBM Cloud

 After running the script, the web UI shows "Person is not in the particular area"

## **Conclusion:**

Developed the web application using Node-RED Successfully
